SUMMARY

Full Stack Developer with 1.5+ years of experience delivering enterprise web and mobile applications. Builds responsive interfaces in React.js, Vue.js, and React Native, and REST APIs in Node.js/Express.js backed by MySQL and Redis. Translates Figma designs into production-ready screens and resolves performance bottlenecks across workflow, QA, and auction-management platforms.

SKILLS

Frontend: React.js, Vue.js, Vuetify, Tailwind CSS, Bootstrap, HTML5, CSS3, JavaScript

Mobile: React Native

Backend: Node.js, Express.js, RESTful APIs

Databases & Caching: MySQL, MongoDB, Redis

Tools: Git, GitHub, Figma

EXPERIENCE

Full Stack Developer — Tibura Solutions, Chennai

Nov 2024 – Present

- Build and ship enterprise web and mobile applications across workflow, inventory, and QA management domains using Vue.js, React.js, React Native, and Node.js/Express.js
- Design RESTful APIs and backend services backed by MySQL, applying Redis caching strategies that reduced backend latency
- Translate Figma mockups into pixel-perfect, production-ready web and mobile interfaces using Vuetify, Tailwind CSS, HTML5, and CSS3
- Diagnose and resolve performance bottlenecks across the Synergy workflow platform and TVS auction suite, improving load speed, API throughput, and end-user satisfaction
- Partner with backend and QA teams to plan releases, streamline cycles, and eliminate regression defects

PROJECTS

Synergy — Enterprise Workflow & Quality Management System

Jan 2024 – Present

- Built and enhanced a workflow and quality management platform handling issue tracking and QA/QC exception resolution across teams
- Architected responsive Vue.js + Vuetify interfaces including dashboards, task containers, and status panels
- Implemented exception-handling modules that standardised QA escalation paths and reduced manual triage effort
- Integrated a Redis caching layer to cut average data retrieval time, and authored Node.js/Express.js REST APIs backed by MySQL

TVS Certified Web Application — Admin Dashboard & Auction Management

Jan 2024 – Present

- Built modular React.js admin dashboard panels with reusable components for vehicle listings, dealer management, and approval workflows
- Designed bidding-status and transaction-monitoring screens giving operations teams real-time visibility into auction activity
- Consumed backend REST APIs to surface live vehicle data, inventory counts, and reporting metrics within the dashboard
- Strengthened cross-browser compatibility and reduced page load times through targeted frontend optimisations

TVS Certified Mobile Application — React Native Bidding Platform

Jan 2024 – Present

- Engineered React Native screens and navigation flows for a live vehicle auction platform serving buyers and sellers
- Delivered real-time bidding with live price updates, countdown timers, and instant bid confirmation
- Created a self-listing module letting users photograph, describe, and submit vehicles for auction directly from the app
- Profiled and resolved rendering bottlenecks, achieving smoother frame rates and a more responsive touch experience

EDUCATION

B.Sc. Information Technology — Madurai Kamaraj University, Madurai

2019 – 2022
